FOR DISCUSSION PURPOSES ONLY

Innovation Pilot Framework (IPF) Portfolio Update

June 12, 2024

Agenda

June 12, 2024 (1:00 - 2:30 PM HST)

- In-flight pilot updates
- Status of pilot concepts in pipeline

In-Flight Pilot Updates

Key Takeaways

Status:

IPF Annual Pilot Update Report filed on 3/11/24

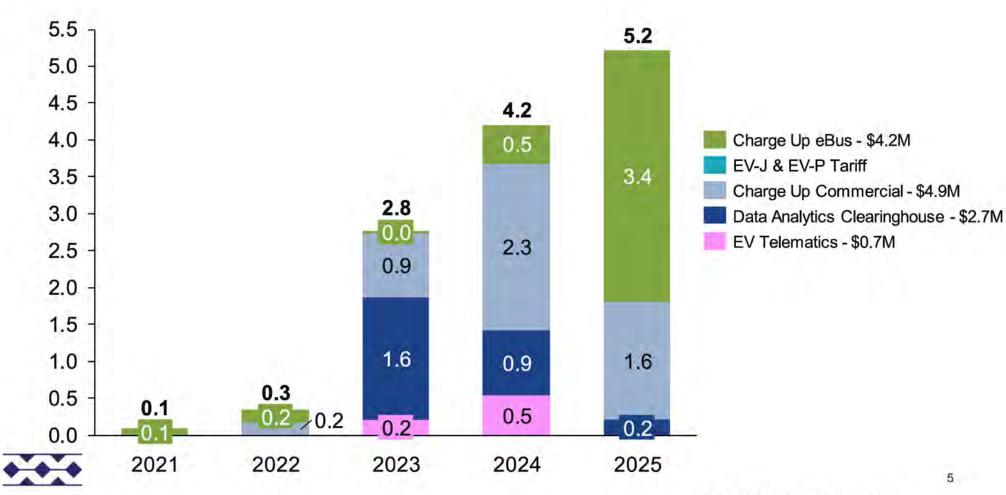

Active pilots:

- Charge Up eBus Yellow: Executed 1 Participation Agreement. 1 agreement pending approval. 1 application pending.
- Charge Up Commercial Yellow: Executed 13 Participation Agreements. 12 Designs. Completed site visits of all
 potentially feasible applicant sites.
- EV-J and EV-P Tariff Green: Continued interest in enrollment with pace limited by the installation of EV charging facilities. Working through hurdles and using a targeted outreach approach with interested customers.
- Data & Analytics Clearinghouse (DACh) Green: Program Increment 05 completed 5/31/24; Program Increment 06 started 6/3/24.
- EV Telematics (Smart Charge Hawaii) Green: Continued focus on enrollment through localized outreach efforts. Large data set being processes for upload into DACh. Continuing the surveying of EV drivers and other stakeholders for feedback.

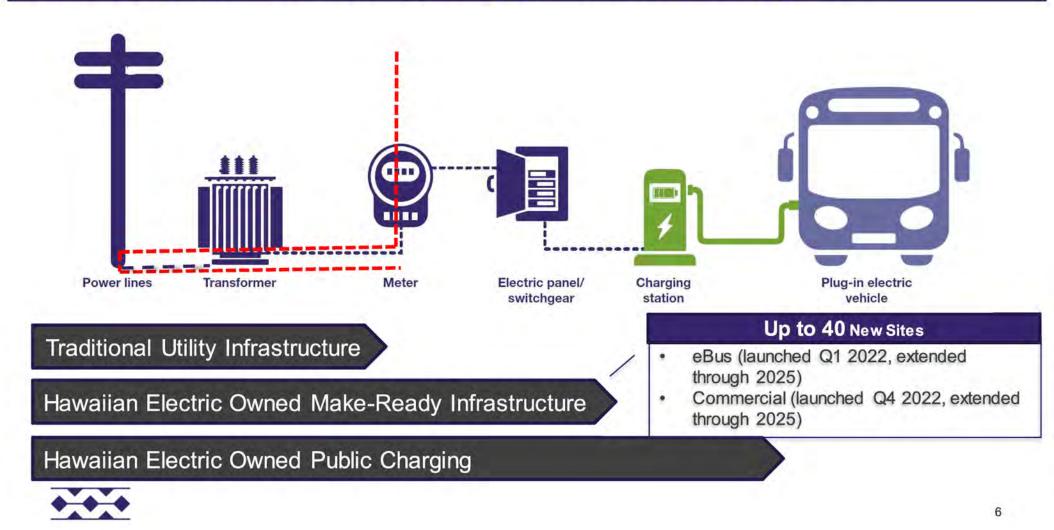

Active Pilots (latest forecast)

Totals may not foot due to rounding

Make-Ready infrastructure as it applies to eBus and Commercial pilots

| | Division | EoT | |
|----------------|-----------------|--------------|--|
| Charge Up eBus | Project Manager | Tandy Tabata | |

Description & Scope

Hawaiian Electric estimates that the make-ready infrastructure installed in eBus Pilot will support up to 20 eBus charging ports at 5-10 customer sites

Objectives

- Enable and accelerate the electrification of bus fleets in the Hawaiian Electric Companies' service territories by understanding customer behaviors and enable customers to transition faster
- Develop ways for the Companies to support make-ready infrastructure by learning how to streamline workflows, understand
 resource needs for charging, and track the costs of infrastructure to develop sound cost estimates for future deployment
- Improve renewable energy integration through bus charging on the eBus tariff

Major Deliverables

- Implementation Process/Customer Journey
- Final Program Design Report & Appendices
- Annual Updates/Spring Reports
- Infrastructure for up to 20 charging ports at customer sites

Risks

- Funding and customer procurement timelines not aligned with Pilot
- Complex/lengthy landowner approval requirements & processes
- Complex/lengthy permit process
- · Supply chain constraints
- · Rising labor and material costs

Original Implementation Schedule

Adjusted Implementation Schedule

Anticipated Schedule

Factors contributing Implementation Schedule adjustments:

- eBus and Charging Equipment RFP delayed by stakeholder concerns.
- Validation of qualified buses and charging equipment impacted by RFP delays.
- Participant modifications to the Participation Agreement and landowner approvals.
- Longer bus build estimates due to supply chain issues. Currently anticipating 18+ months.
- · Risk for longer than expected permit timelines.

Observations & Lessons Learned

- Coming out of the pandemic, the number of bus operators ready to procure eBuses in 2022 were fewer than expected.
- State and County entities requested modifications to the standard participation agreement to align with their requirements, thus extending the time to execute.
- State-owned land adds significant complexity and time to seeking approvals for right of entry and grant of easement.
- Applicants' procurement timelines delayed as a result of external factors.
- Complexity and costs can vary significantly from site to site.
- Bus operators with plans to install more than 2 ports in the near future need to be considered in the make-ready design.
- Uniqueness of each site requires a more hands-on and flexible approach.
- Some facilities may not be eligible for E-Bus rates.
- 10-year data collection commitment can be viewed by some bus operators as a significant resource burden.

- Site 2: Finalize site design .
- Site 3: Complete site assessment ٠

charging equipment (customer) Site 1: Hawaii Island - County of Hawaii Mass Transit Site 2: Maui - Kahului Transit Hub Site 3: Oahu - Ka Waihona o Ka Na'auao Public Charter School

Other Metrics (when available)

- · Actual pilot costs and revenue
- Charger utilization

| | Division | EoT | |
|----------------------|-----------------|--------------|--|
| Charge Up Commercial | Project Manager | Kevin Hachey | |

Description & Scope

Provide make-ready charging infrastructure to eligible fleets, MUDs and commercial sites. Pilot will target up to 20 customer sites (est. 80 charge ports), across Hawaiian Electric, Maui Electric, and Hawaii Electric Light. Pilot will reduce upfront costs for commercial customers seeking to install EV charging infrastructure by providing make-ready infrastructure at Hawaiian Electric's expense.

Objectives

- Install infrastructure for Level 2 charger sites
- Develop actual pilot costs and lessons learned to inform future filings
- Increase enrollment in commercial EV rates
- Collect data to inform future filings

Major Deliverables

- Final Program Design Report
- Implementation Plan
- Annual Report
- Make Ready Infrastructure for Level 2 chargers at up to 20 sites

Risks:

- 6 designs rejected by Company planners due to meter placement not meeting Company engineering standards (Switchboards: unmetered sections cannot be tapped)
- Complex/lengthy permitting processes (each island is unique) could impact installation timeline
- · Rising labor and material costs
- Applicant withdrawals/limited feasible sites
- Complex/lengthy landowner approval requirements & processes

| TOTAL | 159 | 878 | 2,176 | 1,674 | 4,888 |

Observations & Lessons Learned

- eBus pilot informed Commercial Make Ready implementation
 - Cost cap
 - Reduce data requirement
- Anticipate up to 18-20 sites with 4-6 ports each based on cost estimates
 - Outside services site evaluation and design
- Separately metered service can add complexity
- Duration from Pilot acceptance to executed agreement was longer than anticipated
- Customer withdrawals due to
 - 10-year commitment period and uncertainty in customer plans for the site
 - Incremental costs above the cap

Charge Up Commercial

Updates

- PUC approved extending pilot through December 31, 2025
- Modifications to the pilot program:
 - Leverage internal labor in place of outside services where appropriate
 - PUC approved waving separately metered service and EV rate enrollment requirements for primary metered customers
- Plan to file PUC letter requesting exemption from separately metered service and EV rate enrollment for sites with rejected designs. Install sub-meter for data collection
 - Use spare meter socket where available

Next steps:

- Execute participation agreements with qualified applicants
- Finalize site designs
- Schedule construction upon permit approval

| Applications Pending | 7 |
| Participation Agreements Executed | 13 |

*Pending items are awaiting customer signature/approval

| | Division | EoT |
|----------------------------|-----------------|-------------|
| EV-J and EV-P Tariff Pilot | Project Manager | Ethan Landy |

Description & Scope:

The five-year pilot program (2022-2027) features a time-of-use (TOU) rate structure that incentivizes mid-day charging, when there is abundant solar energy flowing into the grid. Schedule EV-J and Schedule EV-P are approved on a pilot basis, available to a max. 1,000 and 500 customers, respectively. Facilities including businesses, workplaces, and multi-unit dwellings may maintain their current commercial rate (such as Schedule J or Schedule P) or choose a new, separately metered EV rate (Schedule EV-J or EV-P) to benefit from TOU pricing a reduced demand charges. The biggest cost savings under EV-J and EV-P are expected to result from the reduced demand charges, which vary with intensity of use and can often be the largest part of a commercial customer's bill.

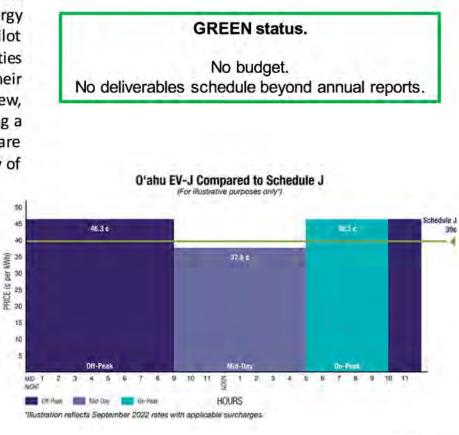

Objectives:

- Measure demand and impact of this type of rate structure on a pilot basis
- Rates are designed to encourage EV charger installation by commercial customers while nudging behavior to charging during mid-day
- Use collected data to inform future filings and/or full-scale deployment

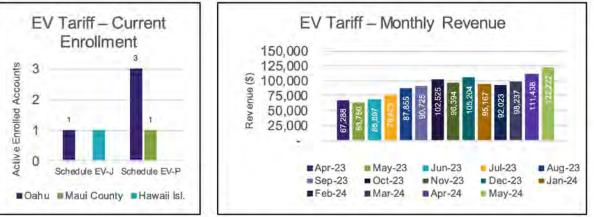

Major Deliverables:

Annual reports

EV-J and EV-P Tariff Pilot Division EoT Project Manager Ethan Landy

150,000 125,000 kWh Consumed 100,000 75,000 50,000 25,000 Mid-Day Off-Peak On-Peak Apr-23 May-23 Jun-23 Jul-23 Aug-23 Oct-23 Nov-23 Jan-24 Sep-23 Dec-23 Feb-24 Mar-24 Apr-24 May-24

EV Tariff - Monthly kWh Usage by TOU Period

Key Risks & Takeaways:

- Sustained interest from eligible customers.
- Enrollment rate is limited by rate of EV charging infrastructure development. No direct financial impact, but dataset to inform future decisions may not be as robust as desired.
- We are continuing to evaluate ways to increase enrollment.
- Despite customer interest, the infrastructure cost for a separatelymetered service remains a barrier to enrollment for some.
- There is an opportunity to increase enrollment by using revenuegrade submetering to disaggregate EV charging loads from other loads.

Status updates:

- D&O 38157 issued on 12/30/21, approving pilot
- Tariff sheets were filed 2/1/22
- PUC approved the final tariffs on 3/1/22 to go into effect on 3/18/22
- Filed proposed rates for Molokai & Lanai on 6/30/22 effective 8/1/22
- Current enrollment:
 - Oahu:
 - EV-J: 1 account
 - EV-P: 3 accounts
 - Maui County:
 - EV-P: 1 account
 - Hawaii Island:
 - EV-J: 1 account (one new enrollment)
 - Continuing to explore ways to facilitate enrollment process

| Residential EV Telematics Pilot | Division | EoT | |
|---------------------------------|-----------------|--------------|--|
| | Project Manager | Timur Tufail | |

Description & Scope

The EV Telematics pilot (i.e., "Smart Charge Hawaii") uses emerging technology (i.e., real-time onboard EV telematics) to collect data on EV charging metrics and provide information on EV driving habits. The Pilot includes a customer-facing interface (i.e., a free app available for download on Google and Apple stores) as well as a utility-focused application (i.e., web-based dashboards displaying real-time customer charging data) developed by a third-party technology vendor (ev.energy). Participants receive a financial incentive for signing up and participating in the Pilot.

Objectives

The purpose of the pilot is to enroll up to 2,000 EV driving participants across our service area, collect telematics data, gain visibility into EV charging behavior data, and then share the data with internal and external stakeholders.

Major Deliverables

- Participant charging behavior dashboards and raw data (cloud-based portal)
- · Feedback from stakeholders on usefulness of data
- · Feedback from participants in the form of surveys/focus group interviews
- Quarterly PUC and stakeholder pilot updates (e.g., participant tracking, heat maps, EV charging trends etc.)
- · Annual pilot update report

Risks

- OEMs could limit access to telematics data for ev.energy
- · ev.energy could be acquired or go out of business
- · Lack of participant sign-ups

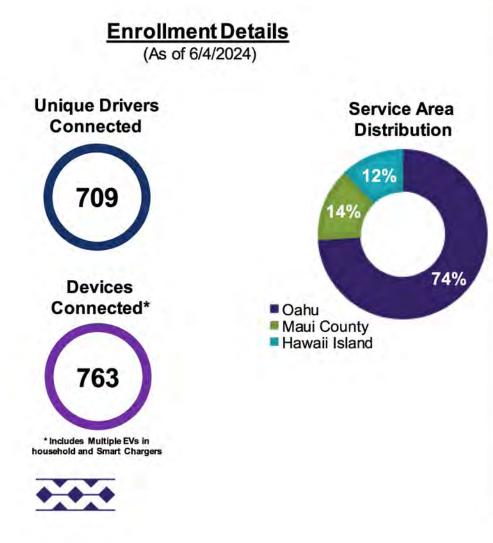

Updated Forecast (on track)

Pilot Updates

- Positive experience at Smart Charge Hawaii Road Show
 - Earth Month Event at Kahala Mall (4/27)
 - Over 200 attendees

- Active media opportunities being pursued:
 HI Now Daily, Spectrum News, Hawaii Public Radio, KHON2
- Developing local EV driver testimonial videos to be promoted on social media.
- EV Telematics data in review process ahead of Data Analytics Clearinghouse upload.
- Preliminary insights and driver feedback results ₂₅ analyzed (see next slide).

Pilot Insights

- Over 42,000 individual charging sessions have been recorded
- Over 700,000 kWh of energy dispensed
- Top 3 OEMs:
 - Tesla
 - Nissan
 - BMW
- Charging Behavior
 - Majority of charging happens during daylight hours (i.e., 09:00 to 17:00)
 - Approximately 70% of participants have Level 2 chargers at home.
- State of Charge
 - Majority of drivers start charging at 60% state of charge.
 - Ending state of charge is typically 90%.

Key Survey Findings

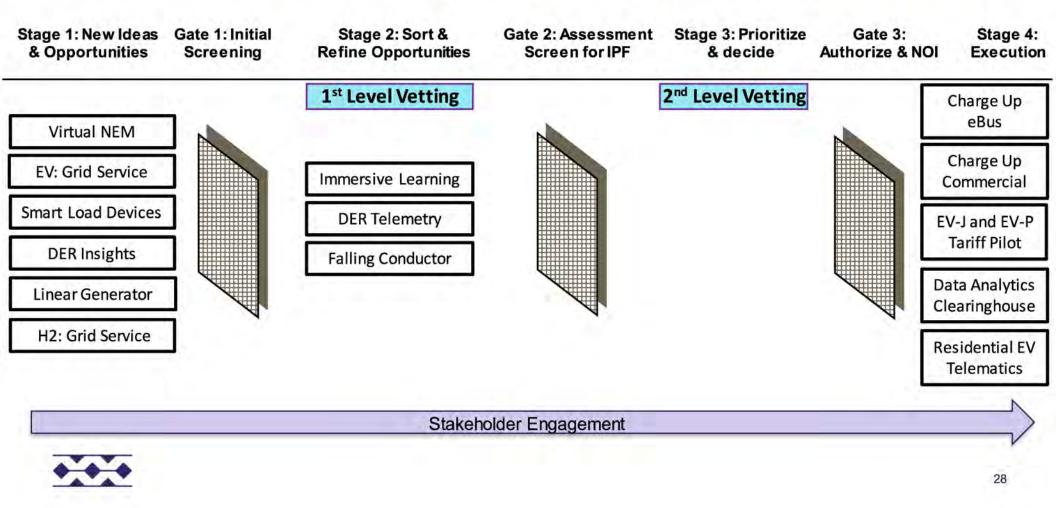

- Awareness: Majority of respondents learned about the pilot via email (47%) with Facebook in second place (18%).
- Incentives: 82% of respondents felt the pilot incentive amount was reasonable.
- Primary Residence: 84% of respondents live in single-family homes (75% of this population have solar panels).

Pilot Pipeline

Innovation Pilot Framework (IPF) pipeline status board

What's next?

- Next quarterly IPF stakeholder meeting: Sept. 18 (1:00-2:30pm)
- Remaining 2024 Meetings
 - Dec. 4 (1:00-2:30pm)
